

FACT: CLIMATE CHANGE HAS GIVEN CALIFORNIA THE WORST AIR IN THE COUNTRY.

Air pollution is choking California. An American Lung Association study found that 7 of the worst 10 regions in the country for air pollution are in CA, threatening public health and our way of life. Smoke from climate-driven wildfires has not only ruined crops, forced business and school closures, and driven us all inside—it also fuels climate change in a vicious cycle. More than 70% of voters agree: we need action now to reduce the emissions that pollute our air and drive climate change.
